

MASTERCLOCK PHILOSOPHY OF QUALITY AND VALUE

Masterclock builds some of the highest quality clocks and timing systems in the world. Our focus is always on quality, user friendly features, support and long term value. All of our products are carefully and conservatively designed for many years of use. They are designed, built, and supported at one location in the USA to ensure that customers can have full confidence in the products they buy from us. Over the years this focus on quality and long term product value has given Masterclock an excellent reputation, leading to major sales with such customers as IBM, Microsoft, Boeing and many other large international operations.

It's always possible to build something cheaper by reducing quality, features and support. Many other manufacturers take this route and build clocks and other hardware that may cost less initially. The Masterclock philosophy is to build the highest quality clocks and timing systems that can be manufactured and sold at a reasonable price and then provide superior product support. Ultimately this provides the best long term value and lowest cost over the life of the product.

June 2008

A handwritten signature in blue ink that reads "William J. Clark". The signature is fluid and cursive, written in a professional style.

William J Clark
President
